A HEALTHIER FUTURE

Smart, frictionless, real world AI-integrated healthcare.

September 2025

AI. It's easy.

Define before you start

What...

Are your problem areas and opportunities that AI can support?

Who...

Is this solution for?
Will it impact?
Owns this?

Validation...

How has this been validated?
Does this require proof and if so, what?
Trust and repetitiveness

Strategy...

Do you have an overarching AI strategy and where does this fit?
How will you measure success?
What is this actually worth?

Data...

Do I have the right data?
What data do I need?
What data will I get back?

DARWEN™ AI

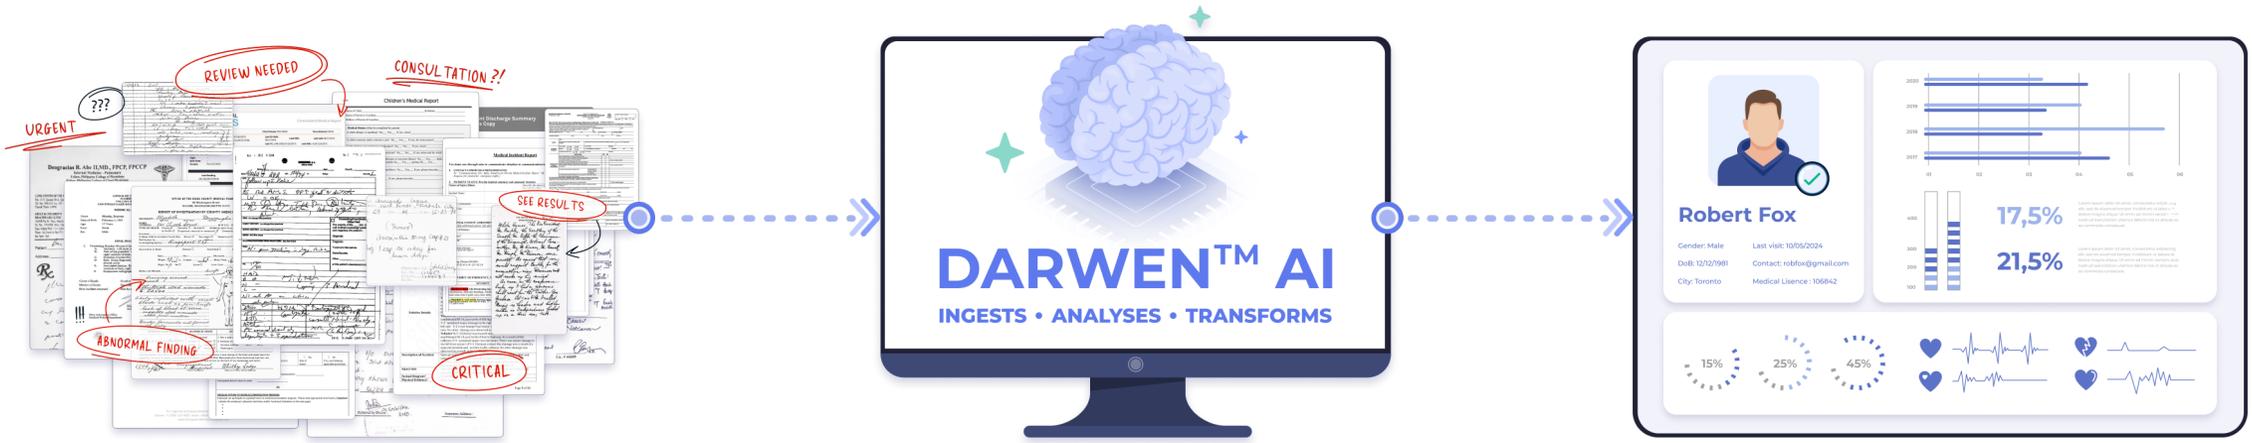

Making use of the unusable.

Approximately 80% of data within healthcare organizations is unstructured, making it difficult to access and analyze.

Missed care opportunities - inefficient manual processes - increased risk exposure - financial impact – utilization – staff impact

What Does DARWEN™ AI Do?

Realize the promise of data-driven Personalized healthcare

Over 80% of the crucial information needed to identify and diagnose patients is **buried in unstructured text** within the electronic medical record (EMR). That’s millions of pages of diverse, cross-functional clinical reports and narratives that are far **too vast for manual analysis**.

DARWEN™ AI **rapidly ingests, analyzes and transforms** all the unstructured text into actionable, easy to use **structured datasets**.

Backed by over 40 peer-reviewed publications, its proprietary AI and LLM technologies deliver unprecedented accuracy.

Structured datasets with billions of datapoints realize the promise of data-driven health care by providing a 360° view of the patient and fueling innovative products and applications to enhance lives and well-being

“Pentavere has blended healthcare with technological innovation to create a more accessible and more personalized future for the benefit of patients”

- Dr. Penny Heaton, Global Head office of the Chief Medical Officer, Johnson & Johnson Innovative Medicines

50+

Publications in high-impact, peer-reviewed journals demonstrating groundbreaking AI advancements with industry-leading accuracy.

Detect. Discover. Diagnose

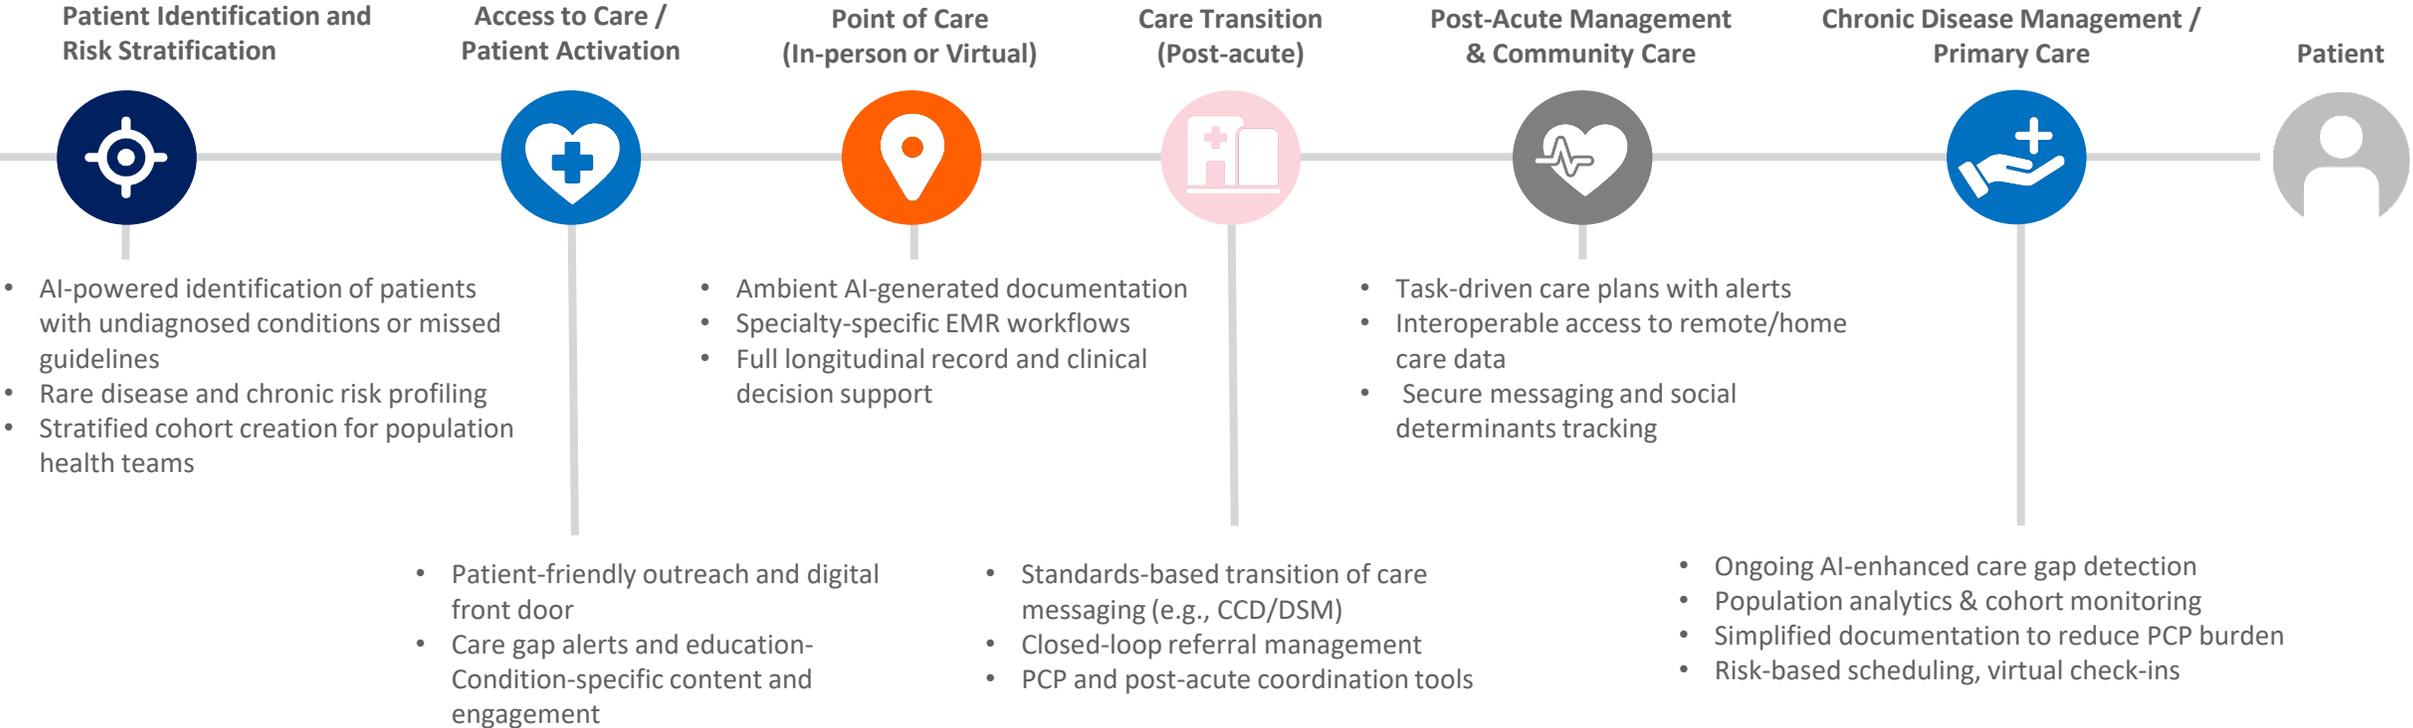

DARWEN™ AI: Identifying Patients, Accelerating Revenue Growth- Grady Pilot

- Valvular Heart Disease affects 2.5% of Americans; ~50% remain undiagnosed or untreated.
- Each valve replacement worth \$52,000 – \$78,000 in billable revenue
- Analyzed 15,467 echos from 11,876 patients.
- Extracted 36 hard-to-find clinical characteristics.
- 200 patients were candidates for valve replacement and missed
- 66% had severe aortic stenosis and met ACC/AHA urgent replacement guidelines.

SOLUTIONS ACROSS THE CARE CONTINUUM

HEALTH DATA MANAGEMENT

- Aggregates patient data from multiple care settings into a unified longitudinal health record
- Configurable privacy, access, and consent controls for secure and compliant data access
- Supports ingestion of structured and unstructured data from EMRs, labs, imaging, pharmacy, and community
- Enables real-time clinical data feeds to support timely decision-making across the continuum
- Built on modern, standards-based architecture (FHIR, HL7, CDA, XDS) for seamless interoperability
- Scalable to support regional and statewide deployments covering millions of patient records
- Powers downstream solutions such as analytics, AI, care coordination, and patient engagement tools
